

Cosine similarity distributions

Left: $|\cos(\mathbf{v}_i, \mathbf{d}_{aa})|$ for proposed vectors — small = mostly orthogonal to assistant axis | Right: $\cos(\mathbf{v}_{aa_i}, \mathbf{d}_{aa})$ for AA vectors (sanity check)

Alignment of proposed vectors with $\mathbf{d}_{aa}$
(near 0 = nearly orthogonal to assistant axis)

AA vector consistency with global $\mathbf{d}_{aa}$
